363     /**
364      * Executes the SQL statement and returns query result.
365      * This method is for executing an SQL query that returns result set.
366      * @param array $params input parameters (name=>value) for the SQL execution. This is an alternative
367      * to {@link bindParam} and {@link bindValue}. If you have multiple input parameters, passing
368      * them in this way can improve the performance. Note that if you pass parameters in this way,
369      * you cannot bind parameters or values using {@link bindParam} or {@link bindValue}, and vice versa.
370      * Please also note that all values are treated as strings in this case, if you need them to be handled as
```
