

Export windows:

(I have tried both selecting answer codes or full answers, but the output is always the same):

The screenshot shows the 'Export results' window with the following sections:

- Format:** A list of export formats with radio buttons. 'CSV' is selected. Other options include Microsoft Excel, PDF, HTML, Microsoft Word, R (syntax file), R (data file), and STATA (.xml).
- Range:** 'From:' is set to 1 and 'to:' is set to 29.
- General:** 'Completion state:' is set to 'Completed responses only' and 'Export language:' is set to 'Italian'.
- Headings:** Four tabs are present: 'Question code', 'Abbreviated question text', 'Full question text', and 'Question code and question text'. Below the tabs are several options:
 - 'Convert spaces in question text to underscores:' is set to 'off'.
 - 'Text abbreviated:' is set to 'off'.
 - 'Number of characters:' is set to 15.
 - 'Use Expression Manager code:' is set to 'off'.
 - 'Code/text separator:' is set to '-'.
- Responses:** Two tabs are present: 'Answer codes' and 'Full answers'. Below the tabs are two checked checkboxes:
 - 'Convert Y to:' with a value of 1.
 - 'Convert N to:' with a value of 2.

By exporting in csv (but the same is for Stata and, I suppose, Spss) for questions of type array (here is q41, q42, q43 of q44) I get the code and the text collapsed (i.e. "2Sufficeinte" instead of "2 Sufficiente" or only "2" or only "Sufficiente" for the first answer of q41.

Note that if you flag "Answer codes" or "Full answers" in the menu for selecting the output apparently you get the same results.

| | AB | AC | AD | AE | AF | AG |
|---|---------|--------------|--------|--------|--------------|-----|
| | q3 | q41 | q42 | q43 | q44 | q51 |
| 2 | Congruo | 2Sufficiente | 4Buono | 4Buono | 2Sufficiente | No |
| 2 | Congruo | 3Discreto | 4Buono | 4Buono | 4Buono | No |

And, finally, this picture shows how I see the .dat file if I select to export the data to Spss (the .sps syntax file is correct, the problem concerns only the .dat file):

SPSS_data_file.dat
